

From Alberta's Forests Newsprint for the World

Under Construction In 1963

The New
AlbertaWest Newsprint Mill
Whitecourt, Alberta

Alberta publishers will soon have available an all-Alberta manufactured newsprint product from our new plant rising at Whitecourt, Alberta. Newsprint, as good or better than any in the world, will be in production by 1964. Daily capacity will be over 300 tons; more than 100,000 tons annually. Bush operations alone will give employment to more than 700 Albertans.

Political Issues Discussed at Meeting

A political Round-Table discussion was held in Gainsford Hall on Monday evening May 6th with a large number of people from various parts of the Stoney Plain provincial constituency on hand to air their opinions. Theme of discussion was "Political Issues in the Coming Provincial Election."

Representatives from all the political parties were there. Social Credit, N. D. P., Liberal and Progressive Conservative to discuss the possibility of a united front, under the Unity Movement, against entrenched privileges in the form of the present Social Credit administration.

Although so many different political viewpoints were represented at the meeting a feeling of unanimity was achieved throughout the session. Final outcome of the meeting was summed up in a motion from the floor to the effect that the group present felt that it was in the best political interests to get behind the Unity Movement and help to elect their candidate.

JOHN PENKALA

John Penkala is the man who will be directing activities at the Drayton Valley Swimming Pool, during the coming summer. John arrived in town early this week to begin preparatory work on the local swim program.

Mr. Penkala is an experienced aquatic leader. He is a fully qualified Swimming Pool Supervisor and Inspector in swimming and water safety according to standards of the Canadian Red Cross Society. He is holder of the Bronze Medalist awarded (Cont. on Page 5, Col. 1)

C. of C. TESTIMONIAL DINNER

Drayton Valley Chamber of Commerce plans a Testimonial dinner for Mrs. C. R. Wood. The meeting will be held in the Cardium Room on the evening of May 18.

Guest speaker will be Dr. Colin Ross. Tickets are available from Chamber of Commerce members. The sale of tickets will be limited to only about 150 persons can be seated in the Cardium Room for a banquet.

SLAVE AUCTION

SLAVE AUCTION FINANCIAL SUCCESS

Auctioneers Pat and Jean O'Hara donated their time and talent to auction on a most successful maiden voyage.

The first few stipules of excitement were stirred up in the after-

noon by two clowns, wearing Sandwich Board signs advertising the Auction, and generally surrounding the town. As well as keeping the light-hearted atmosphere at the Silks Hall at high-

Raised on a farm in the District of Stoney Plain, Constance R. Wood received her education in Edmonton and Calgary and taught school four years before her marriage to Russell E. Wood. Always interested in community affairs Mrs. Wood has taken an active part in all local enterprises and public matters. She acted as Chairman of the Consolidated School Board for nine years, served as Mayor of the Town of Stoney Plain for one term, and has represented the Constituency of Stoney Plain in the Provincial Legislature for 5 years.

(Cont. on Page 5, Col. 3)

The supper was immediately followed by the presentation of

District Personalities

MICHAEL DIDYK

Mike Didyk was born at Spirit River, Alberta, in 1936. Of Ukrainian descent Mike's parents operated a farm near Spirit River. He took his school work in Spirit River and in the winter of 1952 he supplemented it with a term at the Agricultural School in Fairview and the following winter he took a welding course with Chicago Vocational School following graduation from school he worked for a while in a farm implement agency in Spirit River. In 1957 he went to Prince George, B. C., where he went into the trucking business, in which he was engaged until he sold out the business last summer.

In 1944 he married Miss Dora Guback, of Spirit River, who was also of Ukrainian descent. They have three children, Dorcas, aged 9, Marvita, 4, and Debbie, 3. He is a member of the Chamber of Commerce. The Didyks attend the Church of God in Drayton Valley.

BOWLING BANQUET

Reported by Mike Gormley.

BOWLING BANQUET BEST EVER

The fact that Drayton Valley is one of the most enthusiastic bowling centres in Alberta rang true in great style once again last Sunday night. No less than 450 of the Twilight Bowl faithful turned out to the annual Trophy Banquet and Dance sponsored by the Drayton Valley Bowling Association. The function was held in the D. V. Recreation Centre, getting underway at 6:30 p.m. with an excellent meal prepared and served by the ladies of the Legion Auxiliary.

The supper was immediately followed by the presentation of

tide all evening, these two gentlemen also shared their treasure - their books - with the children. During April many new books were bought for children.

CWL Meeting
The monthly meeting of the C.W.L. was held on Monday night with installation of the new executive for the year 1967-1968. The installation took place in St. Anthony's Church with Benediction following.

Scoop's NOTEBOOK
Farewells have been coming thick and fast here for weeks. Starting with Germaine St. Louis, the following week was a farewell for Mr. and Mrs. Jack Barr, and on the same time for Mr. and Mrs. Jack Churchward, then came farewells for John and Nancy Swales. There were four separate parties given for the farewells, standing with one given by the Town Staff (John was a councillor for the Town of Drayton Valley).

THAT EXTRA INGREDIENT
Every prescription written by your physician is a set of instructions to the pharmacist telling him exactly what the medicine he wishes you to have, the form they are to be in and the way they should be taken. It is our responsibility to carry out these instructions to the letter.

POST OFFICE TO ISSUE NEW TWO AND THREE CENT POSTAGE STAMPS

Two and three cent denominations of the new regular issue series of postage stamps portraying Her Majesty Queen Elizabeth II will go on sale at Post Office across Canada on May 20th, 1963.

The stamps will be of the same size as those in current use with one hundred stamps to the page.

Three new stamps, showing a portrait of Queen Elizabeth II, are being issued by the Post Office. The first of the new stamps is a three-cent stamp, the second is a two-cent stamp and the third is a one-cent stamp. Each of the stamps bears in the upper left hand corner, a symbol of a segment of the Canadian economy.

Portrayed on the new two-cent stamp is a tree, symbolic of Canada's forestry and forest products industries. On the new three-cent stamp there is a fish, representative of the fishing industry.

The new two-cent stamp will be given in color, as is the present one, but the three-cent stamp will be purple. The change in color was made necessary because of confusion that resulted from the closeness in color of the present 4¢ and 5¢ stamps. At the same time as the change in color, the Post Office Department also endeavored to have the color made much deeper and to secure inks in which the total white can be easily identified.

YOUR Canada

As told by the Famous Canadian
IMPERIAL CANADIAN
WHY IS ALEXANDER MACKENZIE
A FAMOUS NAME IN CANADA?

Because no fewer than four famous men bore the name. The first was Sir Alexander Mackenzie, fur trader and explorer, who was born in 1764 in Scotland, became a partner in the historic North West Company and in an exploring expedition reached the Arctic Ocean in canoeing along the vast river that still bears his name. Later he became the first man to cross North America, north of Mexico.

Next came Alexander Mackenzie, born about 1767, probably in Scotland. He too became a fur trader and a partner of the North West Company. He was one of the first to explore the Northwest Territory, worked as a builder, became an editor and then a politician. He was prime minister from 1873 to 1878. He was offered and refused a knighthood three times.

Then came Alexander Mackenzie, prime minister of Canada. A Scotman, born in 1822, he came to Upper Canada at 20, worked as a builder, became an editor and then a politician. He was prime minister from 1873 to 1878. He was offered and refused a knighthood three times.

The fourth Alexander Mackenzie was a financier. This lawyer from Kingston, Ontario, was born in 1809. He went to Brazil to conduct legal business, returned to establish the massive Brazilian Traction, Light and Power Company. He was its president for over 20 years, becoming one of the most influential men in Brazil. He died in Kingston in 1884.

do non-fertilized crops. The reason for this is simple enough. Crop plants that are adequately fertilized are able to produce a strong, vigorous, extensive root system which enables them to tap a larger volume of soil for water.

In planning your cropping practices this spring, remember that with proper fertilization your grain crops will be able to get the most out of the available soil moisture supplies. Again in 1963, adequate soil fertility and proper crop protection will be key factors in the profitable production of grain crops.

And then there was the late Texas cowboy who roared into the saloon yelling "Fertilizer!" And everyone did.

Scientist, think of themselves as an oracle which has only to speak and everyone should obey. This is dangerously wrong. — Dr. Jeremy Bray British Pat.

SOIL MOISTURE INCREASED BY USE OF FERTILIZER
(Cont. From Page 8, Col. 3)

ers use every practice that will help them to get the most out of their available soil moisture supplies.

Efficient Moisture Use: Intensive field studies with many different crops have shown that even under relatively dry conditions the proper use of fertilizer plays a major role in the efficient use of moisture by crops. Recent studies of wheat in North Dakota, for instance, have indicated that if there is sufficient moisture in the soil to warrant seeding a crop, it will pay to use appropriate fertilizers on soils which are known to be deficient in plant nutrients.

The fact: Proper fertilization of the soil improves grain yields even where soil moisture is well below optimum levels. It has been found that fertilized grain crops produce more bushels per bush of soil water than

NEW FLEXI TOOTH

HARVESTS MORE CROP - PICKS UP FEWER STONES

Flexi Tooth is a plastic harvesting tooth, developed by Imperial Oil. This new flexible plastic pick-up tooth will pick over or by-pass most stones, rocks and other obstacles. Flexi Tooth out-performs and outlasts conventional pick-up tools.

See your Imperial Esso Agent and ask him about the special introductory offer!

ESSO TRACTOR GASOLINE

The gasoline specially designed for prime farm conditions. Field-tested on thousands of prime farms—provides maximum power at minimum cost.

The Chapel Hour

A parent's prayer

Taken from Corcoran

Help me to understand my children, to listen patiently to what they have to say and to answer all their questions honestly. Keep me from interrupting them, talking back to them and contradicting them. Make me as courteous to them as I would have them be to me. Give me the courage to control my own anger against my children and to ask of them forgiveness, when I know that I have done them wrong.

May I not satisfy lust the feelings of my children, forbid that I should laugh at their mistakes or resort to shame and ridicule as punishment. Let me not tempt a child to lie and steal. So guide me hour by hour that I may demonstrate by all I say and do that honesty produces happiness.

Induce, I pray, the measure in me, May I cease to nag and when I am out of sorts, help me, O Lord, to hold my tongue. Bless me to be little cruel to my children and help me to see the good things that they do. Give me a ready word for honest praise. Help me to treat my children as those of their own age, but let me not exact of them the judgment and convention of adults. Allow me not to rob them of opportunity to tell upon themselves, to think, to choose and to make decisions.

Forbid that I should ever permit them for my selfish satisfaction, May I grant them all of their wishes that are reasonable and have the courage always to withhold a privilege which I know will do them harm.

Make me to feel and live, so considerate and compassionate to my children that they will have a genuine esteem for me. Fit me to be loved and imitated by my children.

Just A Mother's Apron

It was just a faded old apron that mother used to wear. A bit frayed at the waist, and stained, but I guess that what memories and associations it recalls.

A tiny boy or two or three years old playing in the hallway when mother has climbed up into the open folds of freedom in this downy bed. He finds that the bell which the old man wore to the pasture will make a delightful clatter. But the cow, at the other end of the pasture, hears the bell and thinks his mother has returned from the fields. He races to the lot and begins running wildly around the feed box in ever narrowing circles. The tiny boy stands so close to the door of the cabin door or corner window, waving that old apron. And the little boy is rescued. Good old apron!

How handy it was when mother had to bring in green corn, peas or beans from the garden. It even served for carrying children from the woodpile for a heavy up dinner. And how it served as a hot-dish holder as the dirty cases a pan of piping hot biscuits from the oven. Such a useful old apron!

With a firm grip upon that old apron, the youngest of the brood could hold himself up, and by waving it he could take his first steps about the c-hair as his mother sewed, when imagined dances mimicked or someone stranger came, that faded old apron was the place of refuge and protection. When sleepy time came, it was upon that

(Mother's Day)
A mother's secret love outlives them all.

The guardian angel of a man's life is the memory of a good mother.

Of all things on earth, a mother's love comes nearest to the divinity.

A Quiz On Mothers Of The Holy Bible

What mother lent her child to the Lord? (1 Samuel 1).
Of whom did God say, "She shall be a mother of nations"? (Genesis 17:16).
What mother saved her son by selling him? (2 Kings 4:1-7).
Whose wife's mother lay sick with a fever? (Mark 1:30).
To whose mother did the beloved disciple give a home? (John 19:26).

man mentioned in the Old Testament? (1 Kings 1:11).
Who was called the mother of all living? (Genesis 3:20).
What mother's curse of old failed not? (1 Kings 17:1-15).
What mother put her child in an ark of bulrushes? (Exodus 2).
Who was the mother of the first twins mentioned in the Bible? (Genesis 25:24-26).
Whose mother saw Jesus perform His first miracle? (John 2).

Who's New?

Week of April 28th to May 4th.

April 30 Mrs. John MacDonald (Hazel), boy, 9 Bx, 2 1/2 oz.
May 1 Mrs. Jack Clark (Nancy), boy, 6 Bx, 15 oz.
May 2 Mrs. Donald Horton, (Lola), girl, 5 Bx, 3 3/4 oz.

LLOYD'S JEWELRY

Week of April 28th to May 4th.

April 30 Mrs. John MacDonald (Hazel), boy, 9 Bx, 2 1/2 oz.
Mrs. MacDonald may drop in at Lloyd's and pick up her baby's weight.

THE HAND OF GOD
By Russell W. Lake,
Taken From Good Business.

In the restaurant business, Mother's Day is one of the biggest days of the year. On that day hundreds in greater number than usual, escort their wives out to dine at a small table for the thousand or so meals each woman prepares at home during the rest of the year. Restaurants make a big thing of Mother's Day, preparing for it far in advance.

McCauley's Family Restaurant, of Santa Fe Springs, California, last year did thirty per cent more business on Mother's Day than on any previous day since the restaurant was opened three and a half years before. And this was accomplished without any special promotion, special advertising or special offers.

Ray McCaffery is convinced that the increase in business came from a program he put in effect, two months before Mother's Day, without any particular thought of adding to his profits.

Each Sunday this statement appears on the back of every McCaffery guest check - "10% of this check will be donated to the church of your choice." Space is provided for the guest to

SUNDAY - Sunday School - 9:45 A.M., Morning Worship - 11 P.M., Evening Service - 7 P.M.

WEDNESDAY: Prayer Meeting - 8 P.M., Christian Brotherhood Hour - radio broadcast C.H.E.D. Edmonton every Sunday morning 9 - 9:30 A.M.
Dr. O'Brien message is printed each week in "Vital Christianity" a weekly publication of the Church of God.

Ray McCaffery is convinced that the increase in business came from a program he put in effect, two months before Mother's Day, without any particular thought of adding to his profits.

Each Sunday this statement appears on the back of every McCaffery guest check - "10% of this check will be donated to the church of your choice." Space is provided for the guest to

write in the name and address of his church, as well as his own name and address. The same menu is used as for every other day, and there is no increase in price.

That was the only innovation at McCaffery's Family Restaurant prior to last Mother's Day, and apparently it was responsible for a thirty per cent increase in business.

On the front of the large menu is a full-length photograph symbolizing a church. Below the photo are these words: "Support the church of your choice." On the back of that menu is printed "The Spirit of Business" - from the writings of Francis J. Galie, first editor of Good Business.

There is but one Presence and one Power in this establishment the presence and power of God.

COOKING MAGIC

Tested Recipes and Meal Planning Ideas Prepared for Pembina News Advertiser by the Home Service Department of Northminster (Hillside), Limited.

Tender, moist Chiffon cakes are a tantalizing delight for family and party fare. Also:

PLAIN CHIFFON CAKE
2 cups sifted cake flour
1 1/2 cups sugar
3 eggs, baking powder
1 cup, salt
1/2 cup salad oil
7 tablespoons egg yolks
2/3 cup cold water
2 no. vanilla
2 no. grated lemon rind
1 egg egg white (7-9)
1/2 tsp. cream of tartar.

Sift flour, sugar, baking powder and salt into mixing bowl. Make a well in center and add in order the salad oil, unbeaten egg yolks, cold water, vanilla and lemon rind. Beat till smooth. Measure egg whites and cream of tartar into large mixing bowl. Beat until very stiff. Stir whites are stiff enough when a rubber whistle drum through leaves a clear path. Four egg yolks mix into gradually over whipped egg whites, gently folding with rubber scraper. Just enough to blend into a soft dough. Bake for 55 minutes, then at 300 degree F. for 10 to 15 minutes or until cake springs back when lightly touched. Immediately turn pan upside down and let hang free of table until cold.

PLAIN APPLE CHIFFON CAKE
2 1/4 cups sifted cake flour
1 1/2 cups sugar
3 eggs, baking powder
1 cup egg whites (7-9)
1 no. salt
1/2 no. cream of tartar
1/3 cup salad oil
4 egg yolks, unbeaten
3/4 cup pineapple juice

Mix and bake as for Plain Chiffon adding pineapple juice when cold water is added in plain.

ALBERTA CHAMBER OF COMMERCE

Allan D. McTavish of Edmonton today announced that 27th and 28th are the dates of the Annual Convention of the Alberta Chamber of Commerce, of which he is president, and equal community and business leaders through out Alberta to participate through their local chambers of commerce and boards of trade.

The Annual Meeting, he said, will open the doors to the public on which the Chamber's 1962-63 program and relation with government and other authorities, will be based.

Mr. McTavish pointed out that there will be a number of concrete and highly significant items discussed at the Convention which will take place in the Macdonald Hotel, Edmonton. Among the subjects to be discussed by the delegates are the following: Education, Health Services, Highways, Agriculture and many others.

Guest speaker of the Annual Dinner will be the President of the Canadian Chamber of Commerce, Mr. Victor Oland of Halifax.

Delegates from 500 branches of trade and chambers of commerce will attend the Annual Meeting. He added, however, that all member organizations will have an opportunity before the convention to study all resolutions to be presented to the delegates, and to submit their opinions on any and all of the subjects to be discussed. In this way, Mr. McTavish emphasized, the decisions of the Alberta Chamber Annual Meeting reflect the views of community organization from every part of the Province. He also pointed out that voting is not regulated at the Provincial Chamber Convention, that each board and chamber from the communities have proportionately more weight than the larger chambers. This, he stated, is another means of ensuring that the views of the Alberta Chamber, formulated at the Annual meetings, are representative of thinking across the Province.

WHO PLANS ALBERTA'S ELECTRICAL PROGRESS?

You may have heard it said that government-owned power would mean co-ordinated planning for the whole province.

In other words, you are being asked to believe that such overall planning is not in effect now!

What are the facts?

The investor-owned electrical utilities work under such regulating bodies as the Alberta Power Commission and the Supervisor of Hydro-Electric Development.

This government overseeing and directing of investor-owned utilities is precisely to ensure planning in the best interests of the province. At the same time it avoids a government power monopoly, against whose rulings there is no right of appeal. The present system safeguards free enterprise initiative. But, under this system, co-ordinated overall planning is a reality right now!

LUTWORM OUTBREAK IN THE SOUTH

The present outbreak of armyworms in the Calgary, Lethbridge and Medicine Hat areas of Alberta could prove really serious if proper control measures are not taken on farms now being affected.

At this stage of growth the armyworm is between half an inch and one inch long, varying in colour from green to brown. It has a broad dark stripe down the middle of its back which is flanked on either side by a narrower dark stripe.

P.J. Procter, Assistant Supervisor of Crop Protection and Pest Control with the Alberta Department of Agriculture, recommends combining these insects by spraying with DDT or Dieldrin. Delaying spraying will allow the half-grown larvae to mature and pupate before the crop comes up. Once they have pupated they will not do any more damage this year.

Cornal crops which already been damaged will probably recover but flax, mustard and rape will not. However, if they have not been badly damaged they can be sprayed with DDT and Dieldrin. These two chemicals can also be used on cereal crops. Mr. Procter says that cut worm pupae found in an old seed crop is usually enough to warrant spraying.

Endites and dieldrin are not recommended for armyworms in forage crop because these residues will contaminate meat and milk products. A barrier which can be sprayed is the best control measure to use for these crops. Since the armyworm always migrates away from the area where it is found, it should be placed along the southern end of forage crop fields.

Mr. Procter recommends examining and if necessary spraying weedy patches in fields and along roadsides for armyworms. At this time of year they feed on any green growth such as alfalfa and other winter annual weeds and will migrate into adjacent crops in search of more food. Unlike other caterpillars, this species feeds on green grass rather than cutting the plants off at the soil surface.

FARM REFERENCE BOOK

Have you got a copy of the latest edition of the "Alberta Farm Guide"? If not, your dealer has your order in now for his handy farm reference book which contains all aspects of agriculture in this province from growing tomatoes to raising cattle and fixing irrigation ditches.

Agricultural economics, agricultural engineering, dairy farming, horticulture and landscaping are among the many subjects dealt with in this book. The information was collected and prepared by subject matter committees composed of representatives from

the Federal and Provincial Departments of Agriculture and the University of Alberta. All recommendations regarding pesticides, fertilizers, live stock, and plant diseases, feeding form and so on, are based on the latest research findings and data collected by specialists in each field.

Although the "Alberta Farm Guide" gives concise information on a wide range of topics it is not intended to meet the needs of farmers requiring extensive technical information on any specific phase of agriculture. The last section, however, gives a list of agricultural services where specialized information can be obtained.

Thirty thousand copies of the first edition of the "Alberta Farm Guide" have been distributed to residents of this province since its publication in 1955. It is revised every three years by an editorial committee representing the Federal and Provincial Departments of Agriculture, who share costs, and the University of Alberta.

Farmers and others connected with agriculture in this province can get a free copy of the "Alberta Farm Guide" from any district agricultural office or from the Extension Service of the Alberta Department of Agriculture in Edmonton.

FACTS FOR THE FARMER

Rugworm is a fungal infection and the spores are resistant to fumigation.

Delayed seeding is one of the most effective cultural methods of controlling wild oats. W. Lobley, Supervisor of Soils and Weed Control, who

Wood Control with the Alberta Department of Agriculture, reports that under normal field and growing conditions wild oats infestations have been substantially reduced when this method has been used over a period of years.

With delayed seeding, the soil should be tilled to a depth of less than four inches in the spring. This sears the soil and promotes good wild oat germination. Seeding should not be done until the first good crop of wild oats has been killed. In most areas of the province this is usually about the first week in June.

Mr. Lobley recommends Oll and Gateway barley as suitable for using crops for delayed seeding. In some areas a good amount of wild oats has occurred by May 15th in which case wheat may be sown fairly satisfactorily.

All grain crops should be seeded at a heavier rate than normal and a recommended fertilizer used, says Mr. Lobley. This is very important because it enables the crop to get a good start and to compete favourably with the wild oats.

Post-seeding cultivation is an other method recommended for wild oats control. Delayed seeding is usually more effective but it is not always possible to sow an early maturing crop with post-seeding, the reduced or the harrow can be used to good advantage for destroying wild oats plants after the crop has been sown.

Seeding should be done a little deeper than normal and cultivation started when the grain sprouts are about half an inch. Under normal conditions this stage of growth is usually reached four to eight days after the crop has been sown.

Mr. Lobley also pointed out that the two herbicides, Atrazine and Carbyne, can greatly assist in our fight against the wild oat menace. These are powerful supplementary tools which have proved their worth and are being increasingly used in Western Canada.

INCREASED SOIL NITROGEN CONTENT

Can we afford not to inoculate our legume crops? For as little as two cents an acre for the inoculum we can ensure the many benefits derived from increasing the soil's nitrogen content, says Mr. A. W. Goettl, Assistant

Superintendent of Soils and Wood Control with the Alberta Department of Agriculture.

He explains that although legumes convert nitrogen from their roots into forms which all crops can use, they will only perform this function when the soil contains bacteria which live in the nodules on their roots. Most soils which have grown legume crops contain these bacteria but one cannot be sure that they are present. For this reason inoculating leguminous seed with a commercial preparation is a very good investment.

Mr. Goettl reports that a well inoculated stand of alfalfa can produce up to 40 pounds of nitrogen per acre which is worth almost \$5.00 at current fertilizer prices. When the legume crop is well established the soil nitrogen is released for use by subsequent crops. Uninoculated legume seed, however, may deplete the soil's nitrogen supply in the same way as other crops.

Inoculating legume seed is a very simple operation. It entails thoroughly mixing a small amount of the inoculum, a fine ground powder, with the seed according to the rates on the package. For successful inoculation the inoculum must be the correct type for the legume being sown. For example alfalfa and sweet clover belong to the same inoculum group but a different inoculum must be used for alfalfa and red clover.

Seed should be inoculated just before it is sown and not exposed to direct sunlight. When sown, small legume seed such as clover, alfalfa and alfalfa must be covered immediately to a depth of three-fourths of an inch.

Apparently it is not harmful to use more inoculum than the prescribed amount but Mr. Goettl says using too little will not produce the desired results.

Inoculated seed must never be allowed to come in contact with fertilizers, insecticides or fungicides either before or during seeding.

Under the British process, the milk is subjected to a continuous flow of ultra-sonic vibrations at a rate of about a million cycles a second for five minutes. After this it is poured into containers for quick freezing and the freezing is completed within an hour. The quick freezing is an important part of the process.

The scientists working on the project report that when thawed, the milk is identical to fresh milk and even forms a cream line on the container. The quality is reported to be far superior to that of canned or pasteurized milk.

By REV. JOHN R. NIELSEN, B.A., B.D.

Every high priest taken from among men is ordained for men in things pertaining to God, that he may offer, both gifts and sacrifices for sins.

Hebrews 5:1

Last week we considered the prophetic office of ministry. We concluded that the prophet is the representative of God before the people. He is one who proclaims the Word and the will of God.

The priest is also a minister in spiritual matters. He is, however, a representative of the people before God. He is one who brings offerings and sacrifices to God. He intercedes for the people with God.

Today we consider the office of the priesthood. Thus we will complete our study of the holy ministry.

OLD TESTAMENT PRIESTHOOD

The Old Testament speaks of a two-fold priesthood: the natural priesthood, and the Aaronic priesthood. Both of these were instituted by God.

The natural priesthood is that of the family. It has existed from the days of creation. Generally the father, or head of the family clan, the patriarch, functioned as the high priest. But, individual members also performed the

priestly function. The holy Scriptures do not speak specifically of its institution.

The earliest record we have of priestly ministrations is that of Cain and Abel bringing offerings of their substance, and making a sacrifice unto God, Gen. 4:1-5. We read also of the patriarchs who built altars, and offered sacrifices: NOAH, Gen. 8:20; ABRAHAM, Gen. 12:8; JACOB, Gen. 35:1; JOB, Job 1:5; and others.

After the time of the deliverance from Egyptian bondage, God instituted the Aaronic priesthood. He thus took this office out of the hands of the common people, and gave it to certain who were specifically consecrated and ordained therefor.

We read of the establishment of this priesthood in the book of Exodus: "Take thou unto thee Aaron thy brother, and his sons with him, from among the children of Israel, that he may minister unto Me in the priest's office," Exodus 28:1. From this time priestly ministrations were the duty of Aaron and his descendants: hence the term, the Aaronic priesthood.

To minister together with the priests, God established the office of Levite. He separated the whole tribe of Levi from among the people. These Levites were ministrants in the tabernacle and temple. Compare Numbers 3:1-8:26.

JESUS: THE SUPERIOR PRIEST

The Old Testament speaks of another and greater priest to come. Of Him the Aaronic priests were types.

The Psalmist says of this: "The Lord said

unto my Lord, Sit Thou at My right hand, until I make Thine enemies Thy footstool . . . The Lord hath sworn, and will not repent, Thou art a priest forever after the order of Melchizedek," Psalm 110:1-4. Here we hear of another priest who is to come with a different ordination than the Aaronic priesthood. Isaiah and Zechariah speak similarly, Is. 53:1-12; and Zech. 6:12, 13.

The New Testament tells us that this other priest is the Lord Jesus. We read: "So also Christ glorified not Himself to be made an high priest; but He that saith unto Him, Thou art My Son, today have I begotten Thee. As He saith also in another place, Thou art a priest forever after the order of Melchizedek," Heb. 5:5, 6.

The same Epistle further declares that Jesus as high priest is superior to the Aaronic and Levitical priesthood. He is superior in that those former priests received their office by inheritance, whereas Jesus by special decree of God, Heb. 7:13-22. He is superior because they were mortal priests whereas He is eternal, Heb. 7:23-28. He is superior because He has established a superior covenant, Heb. 8:6. He is superior in that He has made a more effective offering, Heb. 9:1-28.

And, since a new priesthood has been established in Christ, the old has been superseded. Jesus has made the one, final, sacrifice for sin, completely putting them away by the offering of Himself, Heb. 10:10-18.

THE ROYAL PRIESTHOOD

We considered above that the original priesthood was a natural priesthood of the family and the individual. It was God's desire that every man should be a priest. Such is still His desire.

Of this the Old Testament speaks in prophecy: "Ye shall be unto Me a kingdom of priests, and an holy nation," Exodus 19:6. Isaiah says of the same: "Ye shall be named the Priests of the Lord; men shall call you the Ministers of our God," Isaiah 61:6.

The New Testament further declares that this priesthood has been established. St. Peter says: "Ye are a chosen generation, a royal priesthood, an holy nation, a peculiar people: that ye should show forth the praises of Him who hath called you out of darkness into His marvelous light," I Peter 2:9.

This royal priesthood, as every other, has its sacrifices and offerings to make. Paul says: "I beseech you therefore brethren, by the mercies of God, that ye present your bodies a living sacrifice, holy, acceptable unto God, which is your reasonable service," Romans 12:1.

The sacrifices of the royal priesthood are sacrifices of love, praise, and trust. Each child of God offers his own.

The new Bible reading guide "Light For Your Way" for 1963 is now available. This guide takes you through the entire New Testament in one year. Readers may receive their copy by writing to: Bible Reading Guide, Box 669, Ponoka, Alberta. Please enclose ten cents.

Western Weekly Supplement — Wednesday, May 8, 1963

Army Blasts Jam From River

Here is Canada's army playing a valuable peace-time role. Army demolition experts, at the request of the Alberta Government, recently freed an ice jam in the McLeod River near Whitecourt, Alta., 110 miles northwest of Edmonton, by using military demolition techniques.

Lt. Robert Selsbanko, Royal Canadian Engineers, a demolition expert from Lethbridge, Maj. R. R. Buckley, officer commanding No. 13 Works Company, Royal Canadian Engineers, and 15 men from the pioneer platoon of the 2nd Battalion, Princess Patricia's Canadian Light Infantry, were flown to Whitecourt by RCAF aircraft.

They freed a 75-foot channel in the Athabasca River where the McLeod joins, and then blasted a 20-foot ice jam in the mouth of the McLeod.

Lieutenant Robert Selsbanko, Royal Canadian Engineers, an Army demolition expert from Lethbridge, drops sticks of dynamite in a hole in the ice jam.

Major R. R. Buckley, officer commanding No. 13 Works Company, Royal Canadian Engineers, and Private Wayne Walls of Lacombe, Alta., 2nd Battalion, Princess Patricia's Canadian Light Infantry, Edmonton, prepare charges of dynamite to free the channel in the Athabasca River near Whitecourt. In centre is A. J. Henderson, acting director of training for Alberta Emergency Measures Organization.

The detonation of 100 sticks of dynamite blasts a hole in the Athabasca River channel.

The Unexplained . . .

This happened 60 years ago, long before the days of radio and television.

My grandfather had moved to the Lac Remi district, some 90 miles from Montreal. The area then was distinctly a pioneer settlement.

One day a friend died in the district and, in keeping with the custom of the time and place, my grandfather and six neighbors sat up overnight with the body. This was known as a "wake."

During the evening my grandfather went to the stove to shake the ashes out of his pipe. He took the stove lifter in his hand and started

to put it in one of the lids. The instant the lifter came near the stove lid, the room was filled with a woman's voice singing in a sweet, pure tone. All heard it in astonishment. When the lifter touched the stove lid or was moved farther away from it, the singing stopped. The music and singing came only when the lifter was at a certain distance from the lid.

My grandfather laid the lifter down. All those present stared at each other in awed mystification. No explanation was ever found. Somewhat similar incidents have been reported since the coming of radio and television,

the usual explanation offered being that through some incomprehensible set of conditions the stove, refrigerator, washing machine, or whatever is involved, is acting as a radio receiver. Since there was no radio at the time of the incident I described, this explanation must be discarded. This in turn raises the question if the explanation given for some recent broadcasts of music from kitchen stoves — even dental fillings — is the right one.

The above item wins this week's prize of five dollars for a gentleman who uses the name of the Old Timer and does not wish his identity disclosed.

Children's Bible Story

By Dorothy Lois Lawton

Joseph Sees His Brothers

Joseph ruled the land of Egypt for King Pharaoh. God had sold him in a dream that there would be seven years when nothing would grow, but before this there would be seven years when the crops would be wonderful. So every good year, Joseph asked all the farmers to bring one-fifth of their crops to the storehouses to save the years of hunger. The people were glad to do this because they had enough and more anyway. It did not seem long until the seven good years had passed. Then there was a great hunger in the land because nothing would grow. We call this a famine.

When Jacob, Joseph's father, heard that there was food in Egypt, he sent his son Judah to buy enough for them to eat. But Jacob did not let his youngest son, Benjamin, go. "I lost Joseph," Jacob said. "I cannot lose Benjamin, too."

Joseph did not know that Jacob was the ruler in Egypt. He did not even know that Joseph was alive. When Joseph's brothers came to Egypt, Joseph knew them at once. But he made sure that they would not know who he was at first.

Joseph's brothers bowed to him, and Joseph thought of the dream he had had when he was young. Do you remember how sure they had been at the idea of bowing to Joseph?

They all said, "We are not spies. We are all brothers. There were twelve of us altogether. The youngest is still at home with our father, Jacob." "I will not believe you unless you bring your youngest brother, too. One of you must stay here until the others take grain to your home and return with your brother. Then I will know that you are honest men. If you do not bring him, you will not see my face again."

The brothers said to one another, "We did not listen to Joseph when he begged us to be kind to him. And we did not tell the truth when he said to us, 'I believe that God is teaching us a lesson.'"

Reuben said, "I told you to be good to Joseph, but you would not listen."

The brothers did not know that the ruler understood them. They could not guess that he was Joseph.

So Simon stayed in Egypt, while the nine brothers took grain back to Canaan, and went to get Benjamin.

New Pipeline For Alberta Gas

Natural gas collected from the important complex of oil fields in the Swan Hills area 110 miles northwest of Edmonton will be flowing to Edmonton by the end of the year. Work is progressing on the 12-inch high pressure gas

transmission line being built at a cost of about \$4,000,000.

Gas reserves which will be available from this oilfield area are estimated at 700 billion cubic feet, approximately equal to the amount originally available in the Viking-Kinsella field on which Edmonton natural gas service was founded in 1923. Viking-Kinsella was the sole source of supply until 1950, and even today it remains as one of the company's more important sources of supply. Northwestern has 16 sources of gas supply presently supplying its system.

Demand for natural gas has been rapidly increasing since the war, due to population growth and the advent of the petrochemical industry. As a result, major increases in gas reserves are necessary to continue to meet the needs of present consumers and to meet future growth. The last major addition to the company's reserves was made in 1950 when a pipeline was laid connecting the Pembina field.

Because of the nature of the terrain, some of which is muskeg, the northernmost 53 miles of the Swan Hills line were laid during January and February to take advantage of the frozen ground. Pipe for this portion of the line was supplied from the Edmonton mill of Alberta Phoenix Tube and Pipe Limited. Banister Construction Co. Ltd. of Edmonton, contractors for the line, expect to resume operations in mid-May.

The gas company project assisted Alberta's winter works program. The pipe has been fabricated in Edmonton, the construction company is an Edmonton firm, and local labor is being used in the construction.

Producers in the area, which include operators in the Swan Hills, Virginia Hills, and Judy Creek fields, are now building the necessary gathering lines and field facilities. Expenditures in the fields are expected to reach \$15,000,000. Construction is to be completed this fall.

Two major river crossings are involved on the route of the line, the Athabasca and North Saskatchewan. Here the pipe is coated with concrete to supply ballast and additional protection.

section, and then laid in a trench on the river bed.

Initial volumes to be delivered are expected to be in the order of 35 million cubic feet per day.

Cutting ditch through frozen muskeg.

Cypress Hills Oddities of Geography

By H. CLIFFORD DUNFIELD
Meadow Lake, Saskatchewan

Within the memory of living men the Cypress Hills region of southwest Saskatchewan, once a vast sanctuary of big game and fur-bearing animals unequalled elsewhere in the province, was still untouched by Indian or white man.

Here, in a combination of varying elevations, coniferous and deciduous forests, grasslands that in places reached to hill top, and climatic conditions peculiar to the Hills alone, Nature produced, and for ages maintained, an almost perfectly balanced wild life economy in plants, plant eating animals and carnivore or flesh eaters. Preyed upon continuously by grizzly bears, cougars and timber wolves, buffaloes, deer, elk and antelope roamed the valleys in great numbers. And in the heavily forested hills and coulees bobcats, lynx, mink and marten relentlessly hunted a host of other furred and feathered creatures with no evidence of any decrease in the wild life population of the area.

Explorers, trappers and traders on their westward migrations in search of new lands and new sources of game and fur, cast covetous eyes on this hunter's paradise, but none dared test the strength or determination of the surrounding Plains Indians who for many generations had declared this area out of bounds for all hunters, including their own tribes.

UNIQUE PRAIRIE FEATURE

Reports of the Government of Saskatchewan say in part: "This elongated plateau-like area is a unique feature in the generally flat, treeless prairie region of southwest Saskatchewan. The

line of Hills runs in an east-west direction for about 100 miles. Its southern slopes drain into the Missouri river and its northern slopes into dead-end prairie lakes.

At its eastern end the plateau is about 400 feet above the surrounding plains and at its western end about 2,400 feet. Individual hills rise to a maximum of 4,500 feet above sea level.

In the "Company of Adventurers," the historian, Cowie writes: "As far back as the memory of the Cree then living (circa 1870) extended, these Cypress Hills . . . had been neutral ground between warring tribes south of the now marked international border, as well as the Cree, the Blackfoot and their friends. No Indian, for hunting purposes, ever set foot on the Hills whose wooded coulees and ravines became the undisturbed haunt of all kinds of game, and especially abounded in grizzly bears and elk. Only wary and watchful war parties of any tribe ever visited the Hills.

INDIANS HALTED EXPLORATIONS

"In general, the Indians feared and respected grizzlies and avoided any area inhabited by them. The tribes of the Blackfoot were particularly warlike and for a long time forestalled exploration and settlement of the Hills."

By 1870, Metis had begun to winter in the eastern fringes of the plateau and in the winter of 1871-72, Isaac Cowie of the Hudson's Bay Company at Fort Qu'Appelle, with a group of Metis from Wood Mountain, hunted there. Although the Indians with considerable hostility, Cowie got away safely in the spring

and reported: "Incredible numbers of grizzly bears and red deer (elk) were killed in the Cypress Hills that year, of which our share of skins was numbered 750 grizzlies and 1,500 elk, and probably the traders and Metis who were not our customers got as many more . . . This natural reservation of the grizzly and the elk soon ceased to harbor them after the neutrality of the Hills ceased owing to our invasion."

Although the Cypress Hills came under the sovereignty of Canada during the years 1873-74, four American trading posts were built there in 1873. Apparently whiskey was their chief stock-in-trade. Its use demoralized the Indians and gave rise to strong feelings of resentment on their part as they found themselves shamefully cheated by the traders.

In May of that year, a group of American and Canadian traders and hunters from Fort Benton on the Missouri fought and massacred a band of Assiniboines which strained the relationships between Britain and the United States.

Paul F. Sharp, professor of history at the University of Iowa writes of the affair: "Few incidents in the colonial history of the Whoop Up country touched off as many basic problems as the Cypress Hills affair. And no incident in the long history of the Canadian-American occupation of the North American frontier demonstrates more clearly the fundamental differences between the two neighbors in their conquest of the Great Plains."

By 1884, a number of ranchers had located in the part of the Cypress Hills that became

A Chat on This and That

Asked what the most common error was in planting nursery stock, he replied that many people do not water thoroughly enough. When anything is planted it should be thoroughly tamped and watered thoroughly. Then lay your hose beside the shrub and let the water soak into the ground as soaked. The earth will settle down solidly around the plant. After a few days more earth may have to be added. The first soaking is most important. If you are transplanting bedding plants when transplants should also be given a

I thought I was really making gardening prowess when I learned to recognize a half dozen different types of dahlias. Then I learned there were over 200 varieties of dahlias. Oh well, happy gardening, and we'll see you soon.

a touch of awe, as an animal with an unquenchable maternal instinct moaningly protested being parted from her final family—a family she had found with extreme difficulty and promptly adopted.

WEEK OF MAY 6, 1963

Anytime Is Appettime

Apples are good anytime, served warm in this Easy-Does-It Apple Cake or Sunny Hot Apple Pie — or crisp and cool in a Poinsettia Waldorf Salad — or just eaten out of hand.

Apples in May would have seemed like a miracle to our grandparents living on this continent. Yet today's shopper almost takes them for granted, forgetting, if she knew, that before the days of modern storage and marketing methods, apples harvested in the fall just couldn't stay crisp and fresh tasting so far into the spring.

Even today, only certain varieties are capable of such long hibernation. B.C. Winesap do it especially well. That's how they got the nickname, "nature's springtime apple". And that's why we find them in our markets to brighten up late spring menus.

The rosy skins, firm pulp and slightly tart flavor of winesaps combine to make them an excellent apple for any purpose.

EASY-DOES-IT APPLE CAKE
1 cup granulated sugar
1/2 cup cinnamon
1/2 cup nutmeg
2 pkgs. refrigerator par-baked biscuits
1 large, red apple
1 cup butter or margarine

Start heating oven to 450° F. Meanwhile mix sugar, cinnamon and nutmeg. Roll each biscuit in sugar mixture; arrange in greased 8-inch layer pan. Core unpeeled apple, 8-11 lengthwise; slice into 20 thin wedges. Put wedges between biscuits; dot with butter. Bake 20-25 minutes or until browned. Or use 1 recipe of your favorite baking powder biscuits.

SUNNY HOT APPLE PIE
1 pkg. pie crust mix
1 1/2 inch pie plate
7 medium apples
2 tbsp. dark, seedless raisins
water

2 tbsp. flour
1 cup light cream
1/2 cup cinnamon
6 tbsp. sugar
2 eggs
2 tbsp. sliced almonds
1/4 cup sliced pecans

1. Prepare pie crust mix as label directs; use to line 11" pie plate, making a fluted or rope edge; prick bottom well with fork. Start heating oven to 375° F.
2. Wash, pare and core apples; cut 1-inch thick slices from one side of each; cut crisp-

cross pattern on other side of each, 1/4-inch deep. In lined pan, arrange six apples, crisscross side up, in circle; center 7th one. Bake 30 min.

3. While pie bakes, soak raisins in hot water to cover. Also in a bowl combine flour, cream, cinnamon, sugar, blend in eggs well, one at a time. Pour this custard around apples; bake 35 min. or until almost set. Drain raisins, sprinkle over custard with almonds. Bake 15 min., or until golden. Remove from oven to rack.
4. Heat apple preserves with long hibernation. B.C. Winesap do it especially well. That's how they got the nickname, "nature's springtime apple". And that's why we find them in our markets to brighten up late spring menus.

POINSETTIA WALDORF SALAD

1 cup halved and seeded grapes
1 cup diced celery
1/2 cup broken walnuts
2 cups diced, unpeeled apples
1/2 cup creamy dressing

Combine all ingredients. Chill. Serve in lettuce-lined bowl. Garnish with wedges of unpeeled apple arranged as a poinsettia with centre of walnut halves, if desired.

CREAMY DRESSING:
Combine 1/2 cup all-purpose flour, 1/2 cup sugar and 1/2 cup salt. Blend in 1 cup prepared mustard, 1 slightly beaten egg, 1 cup water. Cook in top of double boiler over simmering hot water until thick, stirring constantly. Stir in 1/2 cup vinegar. Chill. Beat smooth. Then gradually fold in 1 cup heavy cream, whipped. Makes 2 cups.

CARAMEL APPLE CRUNCH

1 unheated 8-inch pie shell
8 caramels
1/2 cup butter or margarine
1/2 cup, minute tapioca or flour
1 tsp. sugar

7 cups corn, pared, thinly sliced apples
1 tsp. lemon juice
1 cup light cream
1/2 cup granulated sugar
1/2 cup Graham cracker crumbs
1/4 cup all-purpose flour
1/2 cup salt
1/2 cup brown sugar
1/2 cup cinnamon

1. Start heating oven to 350° F. To assemble heat together caramels, water and butter until melted, stirring.
2. Meanwhile, sprinkle combined tapioca and 1/2 cup sugar over bottom of pie shell. Toss apples with lemon juice; as-

range in pie shell; drizzle cream over top.
3. Stir together 1/2 cup sugar, cracker crumbs; 1/2 cup flour, salt, pecans and cinnamon; sprinkle over apples. Stir caramel sauce until smooth; drizzle over pecan mixture. Bake about 1 hour or until crust is brown and apples are fork tender. Best served slightly warm.

CHEESE APPLE PIE

Line a 9-inch pie plate with pastry.
Combine: 1/2 cup sugar
2 tsp. flour
2 tsp. water while stirring mixture; brush over apples.

Cook, then serve in wedges. Makes 10 servings.

DANISH APPLE CAKE

Butter bottom and side of a 1-qt. baking dish. Turn into a bowl 2 cups crumbs (raisins or toast) and stir in 1/2 cup sugar and 1/2 cup cinnamon. Melt 1/2 cup butter in a saucepan over very low heat. Pour evenly over the crumb mixture and toss lightly.

Put 1/2 of the crumbs into the baking dish and firmly press into an even layer on the bottom and sides.
Set out 2 1/2 cups thick, sweetened apple sauce and 1/2 cup butter. Spoon half the apple sauce into the baking dish. Dot with half the butter. Sprinkle with half the crumbs. Repeat layering, ending with remaining crumbs. Bake at 350° F. for 25-30 min. Cool completely; chill in refrigerator for several hours. Serve with whipped cream. Serves 8.

BANANA APPLE FLUFF

2 cups unflavored gelatin
1/2 cup boiling water or apple juice
1 1/2 cups cold, sweetened applesauce
2 tsp. lemon juice
2 bananas, mashed
2 eggs whites

Dissolve gelatin in boiling water; add the applesauce, lemon juice and mashed bananas. Fold in the stiffly beaten egg whites. Pipe into sherbet glasses and garnish with orange sections or peeled grapes. Chill until serving time. Makes 6 servings.

Or use 1 (10 oz.) tin applesauce plus 1/2 cup juice.

APPLES BYREUDEL DOUGH:

2 cups all-purpose flour
1 egg
1 tsp. salt
1/2 cup water
1/2 cup butter
1/2 cup sugar
1/2 cup cinnamon

Mix in enough water so dough is soft but can be handled. Turn out onto floured board and knead until it is smooth and elastic. Let rest 10-15 min. (this is the time to prepare the

filling). Turn dough out onto floured board and roll out as thin as possible. Brush over the dough with melted butter.
4. Large tart apples, peeled and sliced very thin
1 cup sugar
1 tsp. cinnamon
1/2 cup raisins

Brown the crumbs until golden in the melted butter. Sprinkle them over the streusel dough. Cover with a layer of apple slices and raisins, then with sugar and cinnamon. Roll up and slice on a greased baking sheet. Brush with melted butter and bake at 400° F. for 30-35 min. Sprinkle with sugar and serve hot or cold.

BAKED LEMON JELLY

1 cup crushed graham wafers
2 cups unflavored applesauce
1/2 cup lemon juice
1 tsp. grated lemon rind
1/2 cup salt
1/2 cup skim milk
1/2 cup brown sugar
1/2 cup cinnamon or nutmeg
2 egg yolks slightly beaten
2 egg whites
1 cup granulated sugar
1/2 cup vanilla

Sprinkle crushed graham wafers into a lightly greased 7x5-inch baking dish. Combine the next 8 ingredients and spread over crumbs. Cover with marquis meringue with the egg whites, granulated sugar and vanilla. Bake at 325° F. for 30 min. Serve warm. Serves 6.

LEMON-APPLE BREAD

2 cups sifted all-purpose flour
1 tsp. baking powder
1/2 tsp. soda
1/2 tsp. salt
1 cup finely grated apples
1/2 cup shortening
1 cup sugar
1 egg
1/2 cup buttermilk or sour milk
2 tsp. grated lemon rind
1/2 cup raisins

Heat oven to 350° F. Sift flour, baking powder, soda and salt together. Cream shortening, add sugar and egg and beat. Add dry ingredients and buttermilk or sour milk alternately to creamed mixture, blending well after each addition. Stir in lemon rind, raisins and grated apples. Spoon into greased 4 x 5 x 3-inch loaf pan and bake 60 to 80 min. or until toothpick inserted in the centre comes out clean.

APPLE AND PEANUT BUTTER CRUMBLE

6-8 medium apples
1/2 cup butter
2 tsp. lemon juice
1 tsp. cinnamon
1/2 cup sifted all-purpose flour
1/2 cup brown sugar
1/2 cup peanut butter

Peel and slice the apples into a shallow baking dish. Add water and lemon juice and sprinkle with cinnamon. Mix flour, sugar, butter and peanut butter with a pastry blender. Sprinkle this mixture over the apples and bake at 350° F. for 1 hour. Serve warm or cold with whipped cream.

Ye Old Spring Cleaning Is Not What It Used To Be

BY VERA WILLMORE

The time will soon be ripe to observe the age-old custom of spring housecleaning.

It doesn't create the same upheaval as it used to. The sturdy moles of the family are no longer conscripted into carrying rugs and mattresses to the clothesline, there to walloping them soundly with a stout wire beater; rather

has graduated from the stage where she wrapped her hair in a towel as a dust protector while wiping walls and ceilings with the business end of a broom swaddled in a piece of worn-out underwear; the young 'uns miss the fun of swabbing a batch of coil springs with a thin stick rolled in an oil-soaked cloth; young housewives wouldn't know a curtain stretcher from a quilling frame and elders shudder when they remember the great to-do with the stove pipes.

Among other time saving and labor saving aids, the indispensable vacuum cleaner has taken over and today, spring cleaning is carried out on a year-round basis.

There's one job however, that no machine can tackle and that's unloading the accumulation of things the average householder can't bear to part with just in case they may come in, handy some day.

Are you the efficient, make-up-your-mind-and-stick-to-it kind of a person who can toss away a batch of rags that are in perfect shape except that none of them match?

Neither am I, so that makes you a kind of a person who never knows when you might get around to bolting them all down to the same color or booking 'em into a rug.

Here you the courage to get rid of that stack of old sweaters, leading a couple of life for years?

Perhaps, like me, you think they'd make wonderful potpourri dishes or better still, you might find matching cups some day if you're lucky. After all, you DID buy them as "open stock" when you didn't?

What if all bolts down to this: Spring housecleaning for housewives will never reach the heights of perfection unless we ourselves resolve firmly to fork out all the stuff we've been saving, just in case.

There are those who believe "If you keep a thing for seven years you'll find a use for it." It just isn't so, I've tried it.

What about that tartan suit you bought donkey's years ago? It looks just as good as new. Even though the jacket is ripped at the waist, has shoulders padded like a football sweater and the skirt with two inverted pleats front and back reaches to within 10 inches from the floor, it's bound to come back into style sooner or later. Or maybe, if you just get around to it, you MIGHT use it over into a smashing new number.

Figure it out. The odds against the style reviving are about 100 to one and if you haven't made with the maker over by this time, give up the idea. Haul out the suit from that over-stuffed garment bag and give it to some mother who needs to sew for small daughters. She'll love you for providing her with such elegant material.

Can't decide what to do with that old photograph you've been planning to convert into a sewing cabinet, or maybe for sheet music, or even a handy desk? The top was going to be a planter for philodendron, ivy and African violet, remember?

Know what you should do with it? Give it to a rummage sale, that's what. On sure, you bought it at a rummage sale because you do it — yourself neighbor fired you with enthusiasm. Let some one else take it home to gather dust until they get around to giving it to another rummage sale.

And what about the sofa of paper bags that keep jamming a cupboard drawer in the kitchen? They might stay flat if they were folded neatly and weighted down with a stone, or something. Any way, you intended to sort them out into piles of matching sizes kept together by elastic bands. Just now when you want a bag for a sandwich you can't get your hands on anything smaller than a potato sack. Close your eyes, throw discretion to the winds and dump them in the incinerator. They make wonderful kindling.

Come to think of it, maybe you shouldn't be too hasty. You never know when a couple of hundred paper bags might come in handy.

Tired Pullets Lack Calcium

High-producing pullets that continue to lay eggs on a calcium deficient diet may reveal layer fatigue.

Research findings have shown that normal pullets are equipped with a built-in safety valve that cuts off secretions from the pituitary glands as soon as their bodies become abnormally low in calcium.

With some prolific pullets, however, this mechanism does not seem to work and the level of calcium falls as they go on laying. Such chickens make up for this calcium deficiency by drawing the chemical from their bones, weakening them. Such signs of weakness should be immediately remedied by placing them on a calcium-enriched diet.

Isleland's Great Egger can be caused into absorbing boiling water high into the air with a charge of surface-tension-reducing detergent.

Natives stripping bark from a cinnamon tree. The bark is rolled into quills (see full them sticks) to minimize breakage. Broken quills are sold as "chips".

A Spicy Story

No kitchen cupboard is without a tin of cinnamon, for it is one of our most important baking spices. And of picking time, cinnamon bark or cinnamon sticks add zest to a variety of spicy meat accompaniments and to gherkins.

But did you know that cinnamon has wide compatibility with such foods as ham, coffee cake, muffins, spice cake, butter cookies, custards, tapioca, chocolate pudding, rice pudding, fruit pies, broiled grapefruit, apples in any form, hot cocoa and chocolate drinks, sweet potatoes, pumpkins and squash, stewed and pickled fruits.

Use a stick to stir a demitasse of black coffee; add a stick when preparing prunes, baking apples or in applesauce, in apple pies, poached peaches and in custards.

Ground cinnamon adds a special flavor to lamb stew and your taste buds will tingle if you sprinkle it lightly over lamb or pork chops before broiling or over a slice of ham or glazed ham.

For a wonderful quick dessert, slightly soften a pint of vanilla ice cream. Then beat in 2 tsp. ground cinnamon and 1 tsp. rum. Refreeze and serve with hot chocolate sauce.

Cinnamon comes from the dark bark of evergreen trees of the laurel family. Cinnamon cassia, known in the spice trade as merely "Cassia" is the hard most commonly sold in this country as cinnamon. In its different sub-varieties, cassia cinnamon is native to China, Indo-China and Indonesia.

Cinnamon Zeylanicum, sometimes called "true cinnamon" grows mostly in Ceylon. It is popular in other parts of the world, particularly Mexico, but is rarely used in North America. It is almost buff colored and quite mild. It would scarcely be recognized as cinnamon to Canadians, who have always been used to cassia cinnamon.

Cinnamon cassia, or just cinnamon, we know it is a reddish-brown bark with an agreeable aromatic odor and a

Considering A New Range? - Plan Wisely - Shop Carefully.

By VERA WILLSON

If you are about to buy a range that operates on either natural gas or propane gas, you'd be wise to look for a model that incorporates all or many of the latest features for maximum returns on your money.

Most people cannot afford to replace a range when they've discovered too late that it is too big, or too small, or lacks some feature they failed to consider seriously when making the purchase.

So shop around. If only to see what manufacturers have to offer, for you will find a selection broad enough to make your head swim.

If you don't know what to expect in the latest gas ranges, here's what you'll find:

INSTANT HEAT

Top burners that provide any heat from a "keep warm" or a slow simmer to a brisk boil for instant response. All ranges have four top burners. Some provide a fifth between them for a griddle which can be covered when not in use with a porcelain lid which then provides top-to-space. More expensive models feature an automatic top burner that turns itself up and down to hold any temperature you set. It eliminates pot watching and if operated properly, assures you of no scorched or burned foods and no boil overs.

Some ranges have separate drip pans of either enameled or chrome for each burner. In Western Equipment

460 Ewes: 800 Lambs

John Walker, shepherd in the New Elm Barren Colony south of Lethbridge has chalked up a record from the flock. The colony, recorded a gross return of \$16,400 from 460 ewes and 800 lambs, the offspring of 460 ewes.

Walker's feeding and management efforts have resulted in a flock of large strong ewes with an extremely high factor for twins. The original flock was predominantly Romney Marsh breeding which has been bred to Columbia, Corriedale and Rambouillet rams.

Last year's wool clip from the 460 breeding ewes, 120 per cent yearlings and the rams averaged about 12 pounds per head.

Here are 11 time-tested gimmicks that plague customers and so see that you don't fall for them:

1. SYMPATHY APPEALS, or hard luck stories, such as working his way through college, supporting an aged mother, etc.

2. GULLIBILITY APPEALS, such as "You are entitled to a discount of 50¢ if you sign today"—or "You are a consolation prize, but in order to get your winnings, you must sign here."

3. SURVEY PITCH. The salesman who starts their pitch with a so-called survey.

4. "FREE". You have been selected to receive a "Free Set".

5. ADVERTISING DISPLAY. "You have won \$500 credit on our appliances, (which sells for a cheap price), but when you order it, the salesman refuses to sell it to you. He brings in a much more expensive appliance, which was the one he intended to sell to you in the first place."

6. REFERRAL SALES. The salesman asks you to refer the names of 10 friends, who might be likely prospects for his sales, on the understanding he will pay you for each sale made. It may pay off, but more often it does not, and you may lose a friend.

7. RUSH TACTICS. You must sign today — this is a one-call opportunity, and tomorrow you will not be entitled to consideration. The reason may be that the proposition will not stand up to investigation.

8. PAYING A DEPOSIT ON HOME REPAIRS, before work is started. The excuse may be to purchase materials for the job. If the contractor cannot finance sufficient materials to start the job, it is likely that he may not be able to finish the job.

9. COUPONS FOR SALES. You get a coupon which entitles you to a photograph at a cheap price. The salesman wants you to order for a quantity, and if you insist on only the one, you may not get the service you expect. Ask for the names of satisfied customers, and check with them before you pay out any money.

10. A SPECIAL NOTE TO TECHNICALS: Don't pay a deposit and sign a contract without consulting your parents or guardian. The salesman knows the contract is not enforceable, but he also knows he does not have to make a refund of the deposit.

11. If a woman's car weighs 120 pounds, statisticians estimate she would weigh 15 on the moon, 100 on Venus, and 317 on Jupiter.

The Triple-B

Business is a highly competitive affair these days and some firms and individuals whose business moves are conventional are apt to approach you with high-pressure gimmicks that can well lead you into a good deal of grief. Fortunately most firms and salesmen are well aware of their obligations to customers and it is a pity that the Better Business Bureau must constantly issue warnings to be on guard against "sharps."

Here are 11 time-tested gimmicks that plague customers and so see that you don't fall for them:

1. SYMPATHY APPEALS, or hard luck stories, such as working his way through college, supporting an aged mother, etc.

2. GULLIBILITY APPEALS, such as "You are entitled to a discount of 50¢ if you sign today"—or "You are a consolation prize, but in order to get your winnings, you must sign here."

3. SURVEY PITCH. The salesman who starts their pitch with a so-called survey.

4. "FREE". You have been selected to receive a "Free Set".

5. ADVERTISING DISPLAY. "You have won \$500 credit on our appliances, (which sells for a cheap price), but when you order it, the salesman refuses to sell it to you. He brings in a much more expensive appliance, which was the one he intended to sell to you in the first place."

6. REFERRAL SALES. The salesman asks you to refer the names of 10 friends, who might be likely prospects for his sales, on the understanding he will pay you for each sale made. It may pay off, but more often it does not, and you may lose a friend.

7. RUSH TACTICS. You must sign today — this is a one-call opportunity, and tomorrow you will not be entitled to consideration. The reason may be that the proposition will not stand up to investigation.

8. PAYING A DEPOSIT ON HOME REPAIRS, before work is started. The excuse may be to purchase materials for the job. If the contractor cannot finance sufficient materials to start the job, it is likely that he may not be able to finish the job.

9. COUPONS FOR SALES. You get a coupon which entitles you to a photograph at a cheap price. THIS IS YOUR LIFE

Horoscope

By TRENT VARIO

ARIES - March 21 to April 20 - Luck is with you if you let it flow in its own channels. Don't try to force your way at the present. You can be sure that with Jupiter and Venus right in the centre of your sign every thing should favor you without being pushed.

Taurus - April 21 to May 20 - The Sun is helping you at this time but it is in a rather blocked position, being in poor aspect to Saturn, Mars and Neptune. These are three pretty strong planets backing your efforts. This should clear up in an almost magical manner about the middle of May.

Gemini - May 21 to June 20 - Your solar chart is very favorable now. To put it bluntly, you are now "out of the woods" and should see some pretty good times ahead. What you do now, is pretty much right, as your perception in all matters is becoming very keen indeed.

Cancer - June 21 to July 20 - Astrology has some good news for persons born in the sign Leo. The sunrise you have waited so long for, in matters dealing with health or business, has finally arrived. Don't let this period pass you by.

Leo - July 21 to August 20 - Astrology has some good news for persons born in the sign Leo. The sunrise you have waited so long for, in matters dealing with health or business, has finally arrived. Don't let this period pass you by.

Virgo - August 21 to Sept. 20 - New stars are indicated at this time that should work out well.

Libra - Sept. 21 to Oct. 20 - You have a wonderful personality combined with a disposition delightfully open and impressive. You are a rising planet, being in Aquarius now, should lead great big in making your ideas and plans acceptable to all people that you come in contact with.

Scorpio - Oct. 21 to Nov. 20 - "Watch your step" might be a very good piece of advice for this sign now. Scorpio persons could get into a bit of deep water especially as the Moon transits your sign. Be like the wise old owl, sit back and keep out of trouble. It could be disastrous.

Sagittarius - Nov. 21 to Dec. 20 - A new outlook on business matters can bring you tremendous gain if you use it properly at this time. You are gaining prestige in business. Use this wind and you'll now quite a garden. If you scatter seeds haphazardly you may miss the chance of a lifetime.

Capricorn - Dec. 21 to Jan. 19 - If you have some pet project that you've been working on, now is the time to push. The stars will lend their support to practically any worthy venture at this time. Don't expect profits to start rolling in immediately. This may take a little time.

Aquarius - Jan. 20 to Feb. 18 - You have a wonderful personality combined with a disposition delightfully open and impressive. You are a rising planet, being in Aquarius now, should lead great big in making your ideas and plans acceptable to all people that you come in contact with.

Pisces - Feb. 19 to March 20 - Everything in your solar chart points the way to success at this time. You will be entering into a period of living your life over again at the end of this year. Now is a good time to separate the wheat from the chaff. Make past experiences count.

Aries - March 21 to April 20 - Luck is with you if you let it flow in its own channels. Don't try to force your way at the present. You can be sure that with Jupiter and Venus right in the centre of your sign every thing should favor you without being pushed.

Taurus - April 21 to May 20 - The Sun is helping you at this time but it is in a rather blocked position, being in poor aspect to Saturn, Mars and Neptune. These are three pretty strong planets backing your efforts. This should clear up in an almost magical manner about the middle of May.

Gemini - May 21 to June 20 - Your solar chart is very favorable now. To put it bluntly, you are now "out of the woods" and should see some pretty good times ahead. What you do now, is pretty much right, as your perception in all matters is becoming very keen indeed.

Snow Mold Extensive In Western Lawns

For the homeowner, it is now satisfactory to obtain a commercial product such as Merfusin and follow directions on the label. Dr. Lebeau says Snow should not be removed as a method of control because this often leads to greater damage from low temperature and desiccation.

One of the serious effects of the snow mold is that it kills the grass in the killed-out areas. You may think it is a much more expensive application, which was the one he intended to sell to you in the first place."

6. REFERRAL SALES. The salesman asks you to refer the names of 10 friends, who might be likely prospects for his sales, on the understanding he will pay you for each sale made. It may pay off, but more often it does not, and you may lose a friend.

7. RUSH TACTICS. You must sign today — this is a one-call opportunity, and tomorrow you will not be entitled to consideration. The reason may be that the proposition will not stand up to investigation.

8. PAYING A DEPOSIT ON HOME REPAIRS, before work is started. The excuse may be to purchase materials for the job. If the contractor cannot finance sufficient materials to start the job, it is likely that he may not be able to finish the job.

9. COUPONS FOR SALES. You get a coupon which entitles you to a photograph at a cheap price. The salesman wants you to order for a quantity, and if you insist on only the one, you may not get the service you expect. Forty-Five Years In One Job And Still Going Strong

It has been said that once printer's ink gets into your veins, dedication to newspaper work becomes almost an addiction.

Proof of this theory is personified in Tommy Logan, a veteran Linotype operator for The High River Times, now in his 46th year with the newspaper and still touching the keys of his typewriter with undiminished skill.

Tommy joined The Times in 1913 as a printer's devil for Charles A. Clark, then founder of the weekly in 1905 and still carries on for the second generation of the Clark family, the original editor's son, Charles Clark.

His years of service with The Times would now have totalled 50 but for the First World War which whittled five years from his half-century record. In 1915 he enlisted and went overseas. He was severely wounded in both legs at the Battle of the Somme, resulting in three years' hospitalization which was only a prelude to a series of latest features and neoclassical cabinet work.

THE BROILER A final tip. When you are selecting your gas range, look over every feature carefully and particularly the distance of the broiler pan from the broiler flame. Some models may not provide sufficient depth and if you have had no experience with broiling, you should be aware that you need not less than three inches between food and flame and at least three inches to raise or lower the broiler pan.

With Resistant Beaver Alfalfa Seed Available

Seed of the new bacterial wilt resistant alfalfa variety named Beaver is now available. It can be obtained from the seed trade or from the field experiment of the Alberta Department of Agriculture in Edmonton.

Beaver alfalfa originated at the Canada Agriculture Research Station at Saskatoon and Lethbridge. It was tall, early, Lethbridge foreign crops section based, R. W. Fraser to meet western Canada conditions and to fulfill the need for alfalfa in the west.

What the researchers were striving for was resistance to bacterial wilt, satisfactory seed and forage yield, and winter hardiness. All needs have been attained. Beaver has greater resistance to bacterial wilt than Vernal and its resistance to leaf and stem diseases appears quite as good as that of the standard varieties.

In forage yield, Beaver topped Vernal by 5 per cent as an average of all stations. It also exceeded Vernal by 5 per cent under irrigation and by 12 per cent where yields were less than two tons per acre per season. It was equalled in forage yield only by Ladak, and exceeded Grims, Rhinoceros, Zander and Ranger, as well as Vernal.

GOOD YIELD
The seed yield of Beaver was about 10 per cent greater than Vernal as an average of four stations and it was also better than Rhinoceros. Better seed yields were obtained from Grims, Ladak and Ranger, while those of Rhinoceros and Beaver were about the same.

Recovery after cutting was faster in Beaver than in all the other varieties tested except Grims and Ranger. There are too few data to evaluate winter hardiness of Beaver compared with the other varieties, but the researchers say, but decreased winter hardiness is unlikely in view of its parentage. Included in its ancestry are Grims, Ladak, Conack, Turkistan, Viking, and material of unknown but hardy parentage from the Universities of Wisconsin and Nebraska.

Beaver is expected to find a place wherever bacterial wilt is a problem. This will include the irrigated lands of British Columbia, Alberta and Saskatchewan, southern Manitoba and southwestern Ontario.

But it is not only on the irrigated lands that its influence will be felt. While it first showed up in the irrigated areas, it is a problem in all areas where alfalfa grows successfully. For this reason, Beaver in Alberta could become a recommended variety for most of our province.

MRS. THE BUNNY SOUTH NEWS
REPORTS about 15 people present to watch the launching of Arnold Stillmaker's 14-foot kayak at Jensen Lake in Jensen, Sask. The launch was made at the annual banquet which terminated the 34th Guide convention at which were registered more than 800 guides, commissioners and local association members from all parts of Alberta.

That fall, Printer Zink who tomes off newsgum in The Brooks Bulletin recently asked readers, "Who was the girl from the T.C. who fell asleep to the Zandronet at six in the morning and a man in uniform had to awaken her?"

Zink reports that "an anonymous lady has been reading all the discussion regarding the 'drowning' of animals, especially around the White Horse, hence she would like to suggest that Walter West start dressing some of the cows in his feed pen. In Pinks, Of Course" Printer Zink says in his headline.

One of the more unusual odities was received recently by The Bulletin from Mrs. Clifford Standen of Tiley. It's a chicken's egg, the size and shape of a big pea. Some of the newspaper was delegated to take the egg to feel Albert at the egg setting plant for candling, to see if it was right through. We'll be scanning The Bulletin for the result of this investigation.

MR. AND MRS. BURN
THORLACKE, pioneer resident of Denialf were honored recently by members of the community and by their family on their 50th wedding anniversary. Mr. and Mrs. Thorlackle are going to celebrate 50 years of marriage in their own way. They're making plans for a holiday trip to Iceland.

SOUTH OF THE BRIDGE, EDMONTON, ALTA.

Seeding Dates Recommended

When the guess work of early planting time is the aim of an experiment at the Beaveridge Experimental Farm, this research, conducted by Dr. A. C. Corder, has been in effect for only one year, but results are already interesting.

That soil temperature and seedling growth is undoubted, and it is this aspect that Dr. Corder is investigating. Eight seedlings of wheat were made in 1962 the first on April 15 and the last on May 28. For the first three seedlings the soil was cool, but did not affect the number of plants from the first, two plantings (April 19 and 26). It would seem that wheat can be sown into cold soil without harm so long as the soil temperature does not stay below 45 degrees F. for more than 10 days after seeding.

Reduced stands of the early-seeded crops were largely offset by tillering, and yields were not seriously reduced. Maturity, however, was influenced. The first planting was made 25 days before the fifth, but its wheat ripened only 7 days
